

# SELF\_ASSESSMENT\_REPORT.md — template

Every submission contains this file, at the root of the zip. Score yourself against **the rubric of that assignment**, criterion by criterion.

The total you write here goes into the name of your zip: `<StudentID>_<total>.zip`, or `<StudentID1>-<StudentID2>-<StudentID3>_<total>.zip` for group work.

## What to write

# Self-assessment — IA#1

Submitted by: <student ID> — <full name> (group work: one line per member)

Total I claim: 82 / 100

| Criterion | Max | I claim | Evidence |

|---|---|---|---|

| Contract | 25 | 22 | spec.md §Contract — endpoints, payloads, 3 status codes |

| Acceptance criteria | 25 | 20 | AC1–AC4; AC4 has no concrete value yet |

| Edge cases and non-goals | 20 | 18 | §Errors covers 4 of the 5; non-goals written |

| Implementability | 20 | 14 | 2 behaviour questions came back: rounding, who may split |

| Revision | 10 | 8 | spec-revised.md answers both, see the diff |

## What I did not manage

AC4 ("limits") is still a wish — I could not decide the page size without

knowing the menu size, and I did not ask.

## What I would do differently

Write the non-goals first. Two of the questions I received were about things I

had already decided not to build, but never wrote down.

## Rules

- **Evidence must point at something:** a file, a section, a commit, a test name. "I did this well" is not evidence.
- The section *What I did not manage* is scored as honesty, not as failure. An empty one on an imperfect submission reads worse than a frank paragraph.
- The number in the file name must equal the total in this table. If they disagree, the table wins.
- Your self-score does not set your mark — but an inaccurate one costs you. See *Honesty adjustment* below, and in the rubric of every assignment.

## Honesty adjustment

Your self-assessment is compared with the mark you actually earn. The gap is **your total - the mark**, on the same 100-point scale.

| Gap                                 | Adjustment                                          |
|-------------------------------------|-----------------------------------------------------|
| within $\pm 10$                     | none — this is normal calibration                   |
| +11 to +20                          | -3                                                  |
| +21 to +30                          | -6                                                  |
| more than +30                       | -10                                                 |
| -21 or worse                        | -3 — read the rubric before you score yourself down |
| no <b>SELF_ASSESSMENT_REPORT.md</b> | -10, and the file-name total is ignored             |

A criterion you claim with no evidence line counts as claimed-and-not-done for this comparison. The adjustment never takes a submission below 0.

Scoring yourself honestly low costs you nothing inside  $\pm 10$ . Claiming marks you did not earn costs more than the marks would have been worth.
